** Accounting rules require a revaluation adjustment of fixed maturities available for sale to fair value. Without the revaluation adjustment, these assets would be reported at amortized cost. This adjustment includes the unrealized changes in fair value of these assets due primarily to interest rate fluctuations. Torchmark management and most industry analysts, rating agencies and lenders, prefer to view the financial ratios and balance sheet information shown above without the impact of the revaluation adjustment for two reasons: (1) the period to period changes in market value are primarily the result of changes in market interest rates and economic conditions outside the control of management, and (2) about 67% of Torchmark's fixed maturities support interest bearing liabilities, primarily the net policy liabilities. The accounting rule requiring the revaluation does not permit a corrresponding adjustment of the liabilities to market value, which results in an accounting mismatch that can be material to shareholders' equity. Therefore, management removes the effect of the revaluation adjustment when analyzing balance sheet based ratios and financial measures. Management believes that investors can equally benefit from viewing these data.
